

# Bringing Safety and Memories Together

It is difficult to prepare for the unthinkable.....

Most people believe their family to be safe, this is why The National Center for Missing and Exploited Children states that an overwhelming majority of parents do not have a current photo of their child that is suitable for identification purposes.

Most identification products fall short of what they are designed for - having current information within reach at a moments notice.

Once the information is gathered these kits are put in a safe place for months, years and, when needed, are virtually useless to law enforcement. An ID kit with fingerprints and DNA are only going to help identify someone who has been found, **not help find them.**

*IDPoint lifeline* solves the dilemma....

Why lifeline? A lifeline is “a source of salvation in a crisis” but it is also believed to “indicate the length of and major events in one’s life.” We, at IDPoint, have created a fun, easy to use, and inexpensive computer program that can run from a USB drive and save all those events and special moments for generations and provide authorities with all the information you can’t find if the unthinkable does happen.

## LITERATURE

Personal Information helps you keep track of friends, relatives, teachers, counselors, anyone important to your family member. There are sections for school information, medical history, immunizations, medications, clubs, sports.....

## PERSONAL

## PICTURES

Pictures and Video gives you a place to store the special photos, the class pictures, the funny little video clips, a whole lifetime in one place.

## PRINTS

IDPoint will facilitate livescan capture fingerprints, full hand prints of small children, and footprints of infants. Sign up on our website and we will notify you when one of our roving livescan systems will be in your area. DNA kits and IrisScan are also available.

## SCRAPBOOK

As your children grow up you amass a collection of everything imaginable, refrigerator art, report cards, anything you can scan or photograph... put them in the scrapbook and arrange them in folders by year, event, or you decide

## MILESTONES & MEMORIES

All the things you want to say, to jot down, to keep forever but often forgotten..... Milestone and Memories is an electronic journal that will last forever

All this information can be printed or exported at any time.

Imagine if you had all of your grandparent’s pictures, refrigerator art, friend’s names? Why not start now for the next generation? This program is not just child ID or senior ID, it is a lifeline. If the authorities ever do need information, you can give them everything they need to create a profile of your loved one with one keystroke. In the meantime your family’s information is protected by the same encryption required by our government, nuclear, and other high security software installations.
